# Desktop & Mobile Device Management

Your investment in technology extends past the devices themselves—you need to make sure they're properly updated and maintained, decreasing down time and providing a reliable and effective enhanced learning environment. Virtucom can manage every piece of equipment onsite or remotely—implementing new software updates, creating data backups, performing desktop tunings, and monitoring energy consumption.

Once we deploy your hardware and install all necessary software, we function as the administrator for all of your desktops, laptops, and other computing devices.

Onsite support allows us to become a part of your community—we're there so you don't have to worry about devices, so you can focus your efforts and expertise on the people. When a device breaks down, our expert technicians are accessible and responsive. With remote desktop management, we can resolve glitches quickly and efficiently, without even coming down to your school.

Let's see what we can do together.
