Infrastructure Management

Virtucom provides comprehensive IT monitoring, supporting your school or district's entire operational infrastructure—including workstations, networks, servers, databases, and applications. We can work directly with your staff, educating each member on deployment, monitoring, maintenance, and management. We can also serve as your complete IT department, providing responsive 24/7 support both onsite and remotely via web or phone.

We realize there's no "one size fits all" answer for IT. That's why we're passionate about becoming a part of your school or district—to develop personalized solutions that suit your students, staff, and technology.

When you work with Virtucom, you form a trusted, ongoing relationship with IT experts who will set up shop in your area. We make ourselves readily available, providing proactive support for:

- Desktops and laptops
- Network and storage
- Tablets and smartphones
- Remote users
- Hardware purchasing/lifecycle

Let's see what we can do together.
