

Deployment Services

Creating a vision to enhance education with technology is a specialty... Implementing that vision is a totally different skill set. That's where we come in!

With our scalable capability to service 4,000+ systems per day, we are able to customize our services around your plan, from the most basic of services, asset tagging, imaging, provisioning, etching, to coordinating onsite installation with multiple field teams. We create an environment of checks and balances to ensure high performance with accuracy to meet your deployment needs and schedules. Our teams are designed to ensure you have the resources you need to meet the demands of your deadlines.

With Virtucom's enhanced service support, deployment does not end when the last device is handed out or installed; It evolves into an ongoing support model to further ensure the success of your initiatives.

How can we help make your school or district successful and prepare our communities for tomorrow?

Let's see what we can do together.
